

Searching for the best solutions for your next roof structure?

Vercor and Vulcraft can help you stay on top.

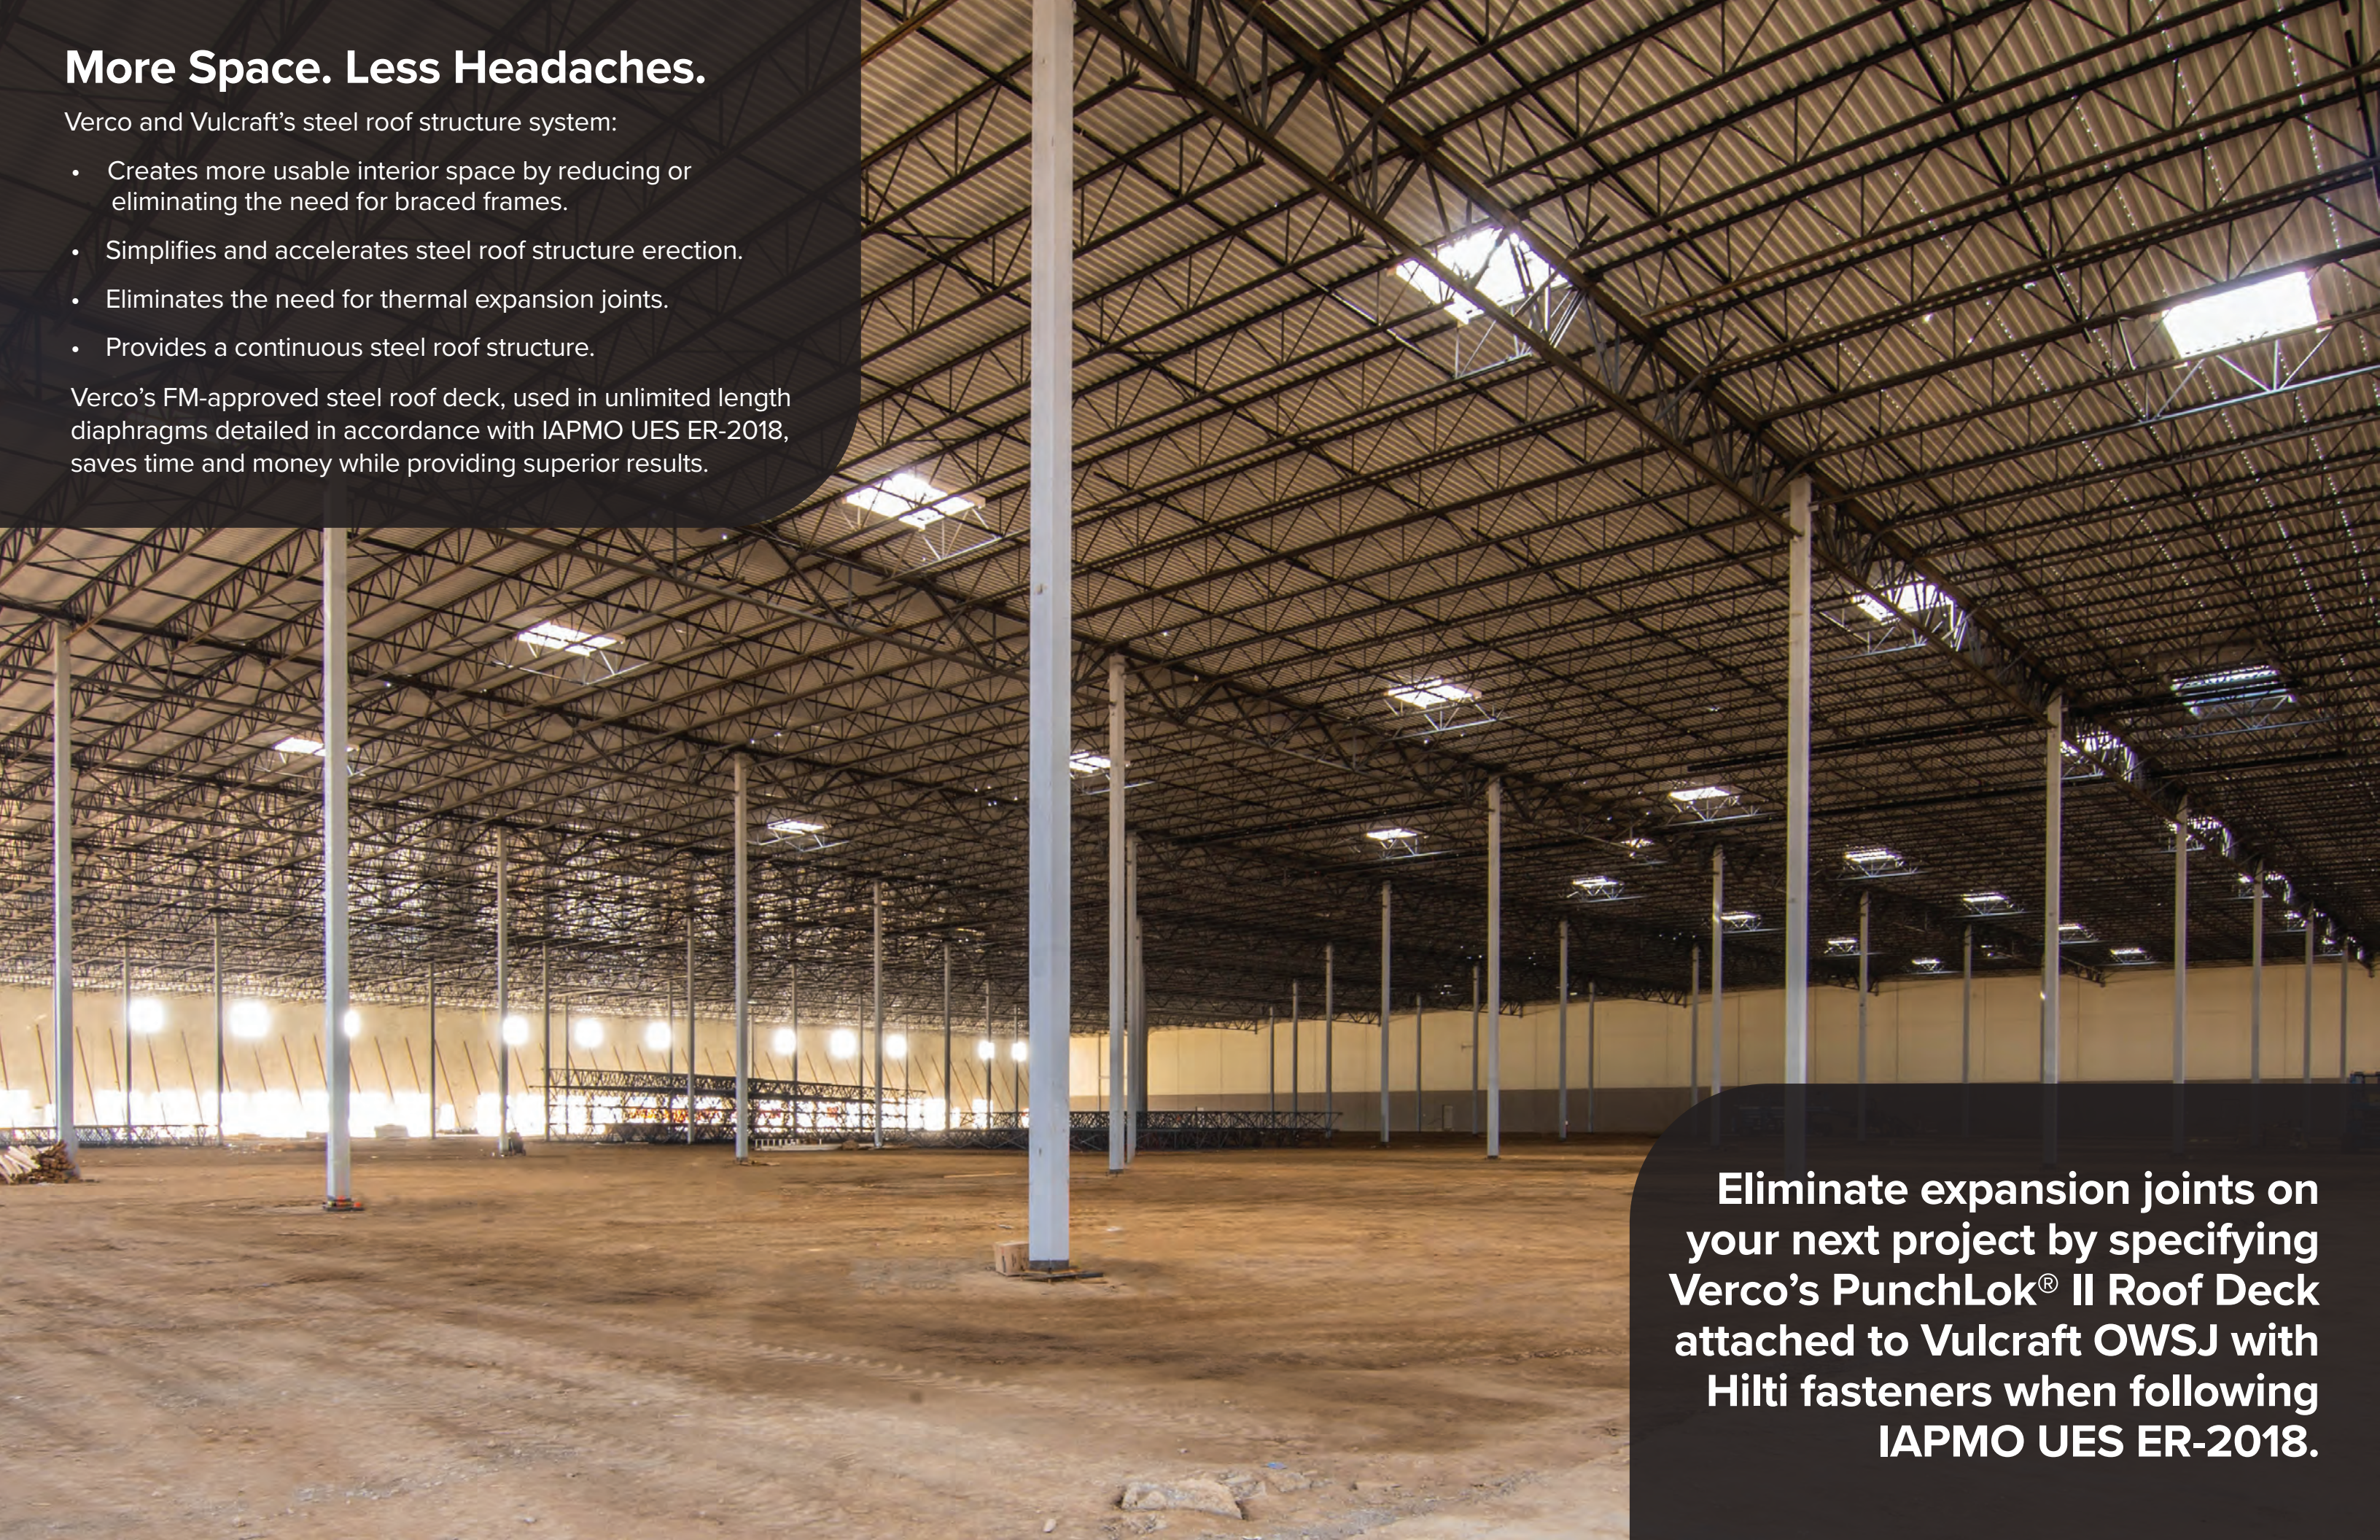

Powerful Partnerships. Powerful Results.

More Space. Less Headaches.

Verco and Vulcraft's steel roof structure system:

- Creates more usable interior space by reducing or eliminating the need for braced frames.
- Simplifies and accelerates steel roof structure erection.
- Eliminates the need for thermal expansion joints.
- Provides a continuous steel roof structure.

Verco's FM-approved steel roof deck, used in unlimited length diaphragms detailed in accordance with IAPMO UES ER-2018, saves time and money while providing superior results.

Eliminate expansion joints on your next project by specifying Verco's PunchLok® II Roof Deck attached to Vulcraft OWSJ with Hilti fasteners when following IAPMO UES ER-2018.

Design roofs free from steel deck thermal expansion joints through the inherent ductility of the patent pending, IAPMO UES ER-2018 recognized, Verco diaphragm system using the PunchLok® II System attached to Vulcraft OWSJ with Hilti PAFs.
